Statement

The ON TAP V-MF filter is compatible with both the new ON TAP Pro V-MF system and the previous ON tap version equipped with a digital display.

The ON TAP V-MF filter ensures the same performance as the previous version, so-called HF, with the reduction of:

- Chlorine
- 99.99% bacteria
- Microplastics
- Metals
- Pesticides, herbicides and pharmaceutical residues

We changed the name of the filter to ON TAP V-MF because we launched a new version of the ON TAP system, so-called ON TAP Pro V-MF, equipped with digital LCD, 3 water functions and quick and tool-free installation.

For the first transition period between the two filters, it may happen that the packaging of the ON TAP V-MF filter may still be present under the name HF Filter: we have decided to use what has already been produced, both in terms of filter and label, in order to avoid unnecessary waste. You can rest assured of the same guarantee for quality and performance as usual standard.
